## HOW TO CUT A 9" X 11" FULL SHEET TO FIT YOUR SANDER

1/2 sheet

1/4 sheet

1/3 sheet

Block

**CLOTH / SCREEN / PAPER**

**CLOTH** - For general purpose sanding where flexibility and tear-resistance are most important. Cloth backing provides increased strength and durability.

- hand strapping
- blending machine tool marks
- light deburring
- cleaning pipe & tubing

**SCREEN** - For sanding where life and load resistance are most important. Coated on both sides with silicon carbide abrasive, the open mesh design also allows you to rinse and reuse.

- sanding plastic pipe prior to gluing
- preparing copper pipe and fittings prior to soldering
- sanding softer materials where loading is a major problem such as plaster, wood, drywall, brass, etc.

**PAPER** - For fast, easy sanding when long life and consistent finish are most important. High strength latex backing offers superior strength and reduced edge wear. PSA backing for easy on/off.

- preparing primed and painted surfaces
- bare wood sanding

**CLOTHS**

Micro-fiber is a single fiber with a thickness less than a human hair that has been split 16 times and woven into various products. The surface area of the micro-fiber product is increased over 15 times, creating millions of spaces between the fibers which trap dirt, grime or liquids, making this product one of the most absorbent materials. These “V” shape splits, while less than a micron in size, have edges that collect debris as opposed to pushing debris away. The particles are trapped in between the fibers and can be rinsed or machine washed to release heavily embedded particles. Micro-fiber products can be washed up to 300+ times without losing cleaning and trapping abilities. Micro-fiber products save you labor time and additional costs of multiple cleaning products and chemicals. Use the micro-fiber products dry for general cleaning. To remove spills, stains or grime, lightly dampen the product for best results. All micro-fiber products can be used with or without chemicals.

**Micro-Fiber Cleaning Cloth (Blue)**

Used for general wet or dry applications. Works best when sprayed with a light water mist to deep clean.

**Micro-Fiber Dry Tack Cloth (Red)**

The woven terry cloth has a low profile to resist snagging and help pick up embedded debris. This cloth is used in dry tack applications.

**Micro-Fiber Polishing Cloth (Yellow)**

Streak free cleaning of mirrors, optical lens and high polished items.

**Tack Cloth (Non-Microfiber)**

Special “tacky” coating picks up sanding residue and loose dust to ensure a quality, smooth, final finish. Disposable.

**tip**

Micro-fiber is virtually scratch resistant but may pick up debris that can scratch. Clean micro-fiber products often for best results.

Norton tape has been designed to extremely high standards. It's adhesive strength and flexibility ensures it conforms easily to contours and irregular surfaces. Leaves no residue and stays in place until you take it off.

### Norton Professional High Heat Tape

Designed for maximum performance and clean release on multiple surfaces. These high quality masking tapes are ideal for conditions that include exposure to the high heat curing temperatures found in automobile, truck, bus and other transportation assembly operations as well as aerospace manufacturing applications where a conformable, clean release masking tape is required. Available in bulk, accordion wrapped for protection and work site stocking, and sold by the case.

### Norton Blue Core 14 Day Tape

This premium grade, clean release tape comes in various widths for maximum versatility. Ideal for masking hardwood gym floors for game-line painting, as well as masking and hanging plastic sheeting for dust control.

Norton Blue Core 14 Day Masking Tape meets or exceeds market standards. The medium adhesion backing means just enough tackiness to stick well to surfaces without the risk of pulling off paint from the wall or leaving adhesive behind.

### Norton Contractor Grade Tape

A general purpose masking tape that offers both economy and versatility for a variety of materials and applications. Provides a clean release up to 3 days. Use for paint masking, hanging protective plastic, holding drop cloths in place and other general purpose masking needs where the tape will be removed when the project is complete.

### Carpet Masking Tape

This carpet masking tape is made of semi-rigid mylar film with pressure sensitive adhesive and release liner on half. Easy to install and remove with better protection from paint seepage than standard tape that cannot fit under the trim. Each roll masks a 10ft. x 12ft. room.
