

NON-WOVEN PADS AND ROLLS

Non-woven is an ideal replacement for steel wool for heavy-duty cleaning and stripping through finishing to light-duty polishing:

- flexible – can be cut or folded
- won't rust, shred or splinter
- washable and reusable
- use with/without chemicals

CLOTHS

Micro-fiber is a single fiber with a thickness less than a human hair that has been split 16 times and woven into various products. The surface area of the micro-fiber product is increased over 15 times, creating millions of spaces between the fibers which trap dirt, grime or liquids, making this product one of the most absorbent materials. These “V” shape splits, while less than a micron in size, have edges that collect debris as opposed to pushing debris away. The particles are trapped in between the fibers and can be rinsed or machine washed to release heavily embedded particles. Micro-fiber products can be washed up to 300+ times without losing cleaning and trapping abilities. Micro-fiber products save you labor time and additional costs of multiple cleaning products and chemicals. Use the micro-fiber products dry for general cleaning. To remove spills, stains or grime, lightly dampen the product for best results. All micro-fiber products can be used with or without chemicals.

Micro-Fiber Cleaning Cloth (Blue)

Used for general wet or dry applications. Works best when sprayed with a light water mist to deep clean.

Micro-Fiber Dry Tack Cloth (Red)

The woven terry cloth has a low profile to resist snagging and help pick up embedded debris. This cloth is used in dry tack applications.

Micro-Fiber Polishing Cloth (Yellow)

Streak free cleaning of mirrors, optical lens and high polished items.

Tack Cloth (Non-Microfiber)

Special “tacky” coating picks up sanding residue and loose dust to ensure a quality, smooth, final finish. Disposable.

tip

Micro-fiber is virtually scratch resistant but may pick up debris that can scratch. Clean micro-fiber products often for best results.
